PGH Bricks & Pavers™ is one of Australia's largest clay brick manufacturers. It offers broadest range of bricks and pavers for residential, architectural and commercial applications on Australia's East coast.

PGH Bricks & Pavers™ is committed to service excellence and has manufacturing capabilities in South Australia, Victoria, New South Wales and Queensland.

PGH Bricks & Pavers™ has a long history and deep expertise in brickmaking excellence. The name first came into existence in 1958 when the building companies established by Maxwell Porter and David Galbraith (incorporated in 1899 and 1949 respectively) merged with Hanson Consolidated industries.

PGH Bricks & Pavers™ was then part acquired by CSR in 1989, marking CSR's first foray into the brick industry. In May 2015, CSR and Boral formed a joint venture, Boral CSR Bricks Pty Ltd, which combined their brick operations along the east coast of Australia. This partnership

brought together the best of Boral and CSR's brick offering under the one brand of PGH Bricks & Pavers™. In November 2016, CSR acquired Boral's interest in the joint venture. PGH Bricks & Pavers™ is now wholly owned by CSR.

CSR is one of Australia's oldest companies and today has revenues over \$2.0 billion and is part of the ASX100 with over 3,000 employees across Australia and New Zealand.

See www.csr.com.au for more information.

WHY BRICKS?

Solid Investment

Building with bricks equals fewer upfront costs and virtually no ongoing maintenance costs, as well as energy bill savings. When it's time to sell, brick rates well because it's trusted over newer cladding materials that haven't stood the test of time.

Energy Efficient

Brick insulates in a way most materials do not. By following good design principles and combining bricks with insulation, your home will keep warm in winter and cool in summer, so you'll love coming home.

Creative Colour & Choice

With our diverse range of sizes, shapes and textures, and over 180 colours, we have a brick to meet your needs. With smart design, blending of brick types and diverse bricklaying techniques, the options with bricks are truly endless.

Strong & Safe

Bricks are permanent. They're weather and age proof. Bricks don't get tired like other man-made materials. They won't twist or warp, rot or decay, erode or dent. They are resistant to the extremes of the Australian climate and being non-combustible, they don't assist the spread of fire.

Low Maintenance

Bricks require virtually no upkeep or repairs, avoiding ongoing costs. Unlike other products, the colour is baked into the product so it lasts for a lifetime. Remember, render will need to be repainted over time, an important fact to consider when looking at the 'whole-of-life' cost of your home.

Sound Reduction

The density of brick makes for a quiet home, with dramatically reduced external sound, such as aircraft, road traffic and noisy neighbours. Brick can also reduce noise transfer within the home when used on internal walls.

DID YOU KNOW?

Thermal research* has shown that clay brick is superior in producing thermally comfortable, energy efficient environments for people to live, work and play. The high thermal mass of clay bricks means they absorb heat well, slowing the passage of heat through a wall.

Metallic: Pewter

HOW TO CHOOSE A BRICK

Bricks are strong, durable and a popular choice for new home builders and renovators. However, with a broad range of great options available, choosing bricks may seem overwhelming!

Here are some tips to guide you through the process.

1. RESEARCH THE STYLE OF THE HOUSE

A brick's colour, shape, size and texture will influence the overall look and feel of your house, so make sure you choose a brick that suits the design of your home. It's worth getting ideas from the internet, display homes, websites, magazines and PGH Display Centre Colour Consultants. There are many options and combinations to choose from to achieve your design vision.

2. CONSIDER YOUR LOCATION

Bricks are graded to suit different environmental conditions. The location of your home will determine which grade you need. If you live near the coast or have high-saline soil, you should use an exposure (EXP)* grade brick, they have heightened resistance to salt attack.

General purpose (GP) grade bricks are suited to all other building types and locations.

*(EXP) bricks are recommended for homes located up to one kilometre from a surf coast or 100 metres from a non-surf coast.

3. ACHIEVE THE DESIRED LOOK THROUGH COLOUR, TEXTURE & SIZE

Add character with texture

Brick texture can add character, charm and individuality to a home. Brick textures can vary from a smooth finish, which has a consistent surface appearance and straight edges, to torn textures with a dragged or ripped appearance across the face for a weathered look. You can even get glazed bricks that have a shiny ceramic tile look for feature walls or beautiful sandstock bricks that give your home an authentic raw beauty that no other material can achieve.

Create visual interest with size

Bricks are available in a range of dimensions. Decisions about size may depend on a range of factors, from the proportions of the house to the purpose of the bricks. Bricks are often used for decorative applications, such as feature walls, window sills and fire places. Different sizes and shapes can be combined to create visual interest and depth.

4. PUTTING IT ALL TOGETHER

Don't forget the details

When it comes to mortar (what binds bricks together) you need to consider the colour and finish, as both will have a striking impact on the look of your bricks.

An off-white mortar between darker coloured bricks will add contrast and highlight the shape of each brick. Whereas matching mortar to the brick will soften the brickwork. Be mindful, mortar colours can vary depending on the sand source.

Common Mortar Colours:

- Natural or grey
- White or off white
- Cream or buff

With the mortar joint finish, you can choose round, ironed, flush or struck, depending on whether you want to hero or soften the brick work. For instance, a Raked Joint will create shadowing for contrast and interest. A Flush Joint will minimise shadow and create a flat look.

Raked Joint **Ironed Joint** **Flush Joint** **Struck Joint**

Laying it all together: Bond Pattern

A bond is the pattern in which bricks are laid. The most common bond is Stretcher Bond which consists of courses of full bricks where every course is offset half a brick from the course below. Stacked and Flemish are also popular and achieve an alternative look.

Stretcher Bond

Stacked Bond

Flemish Bond

HOW CAN WE HELP?

We know that building and renovating can be a confusing and stressful experience. We want to ensure your experience is an enjoyable one, so we've provided a range of tools to help you along the journey.

THE PGH™ WEBSITE - YOUR ONE STOP SHOP FOR INFORMATION AND INSPIRATION

The PGH™ website aims to educate, inspire and inform. Learn why bricks are a brilliant building material, get information on brick trends, be inspired by our photo gallery and see our extensive collection.

Visit our website pghbricks.com.au

VISUALISE YOUR DREAM SCHEME WITH COLOURTOUCH

ColourTouch enables you to mix and match PGH™ bricks and pavers with roof tiles and trims to create a conceptual exterior of your dream home. It's a great place to start when visualising what colours and textures work well together. Use our predefined colour schemes or create your own.

Log onto colourtouch.com.au today to discover a world of possibility.

SEEING IS BELIEVING AT PGH™ SELECTION CENTRES

When you visit our Selection Centres, one of our Colour Consultants will be able to assist you through your brick selection process. Given your facade is made up of 60% bricks, 30% roof and 10% gutter, we want to ensure you achieve the look you're after. We even have specially designed selection tools to make the selection of your whole exterior scheme easier.

There is nothing like seeing colours and textures in real life. We have an array of bricks and pavers on display in our centres. When you've decided on your preferred brick, samples are available to show your family and friends.

TECHNICAL KNOW HOW

Need some more technical help?

Simply call 13 15 79 and we can direct you to any number of experts within PGH™.

Our team have literally hundreds of years of collective brick experience, so no matter the question, we will have someone to assist.

DRY PRESSED

Dry Pressed bricks are for those that appreciate the craftsmanship of traditional bricks. It's the unique way our Dry Pressed bricks are made that makes these premium bricks so special.

Dry clay is pressed into individual moulds under high compression to create solid bricks with sharp, clean edges. Firing in boutique batch kilns enables us to make a wide variety of crisp colours from deep dark blues to light creams. These bricks can be used to create modern showpieces in residential or commercial properties, or to match existing brickwork.

SANDSTOCKS

Sandstocks: Balmain

Our Sandstock bricks honour an important part of our history, the traditional method of brick making. Only a handful of companies still make these 'Convict Bricks'.

Incredibly wet clay is dropped into large sawdust lined moulds to produce solid bricks with very individual rough and irregular textures and shapes, giving them their hand-made character and beautiful appearance. Fired in intermittent batch kilns, we can alternate the temperature to produce a variety of colours and tones, reminiscent of the very old down draught wood or coal fired kilns.

PGH™ Sandstock bricks are timeless in their look and feel and deliver a statement of tradition and authenticity. They are suitable across a variety of building designs, ranging from contemporary prestige homes to projects requiring an authentic colonial period look.

Cultured Stone® by Boral®

Cultured Stone cladding comes in a wide variety of shapes, colours, sizes and textures to satisfy the most exacting tastes. Each texture is cast in the mould of a natural stone, and meticulously hand coloured to give it a visual authenticity that can't be matched. Whether a project is interior or exterior, commercial or residential, there's a Cultured Stone cladding solution perfect for the job.

COUNTRY LEDGESTONE

The extensive palette of installer-friendly Country Ledge Stone stone cladding differentiates one ledge stone from another. It also provides a more subtle blend of colour. For a bolder, more random look, pair with Dressed Fieldstone stone cladding in matching or complementary colours.

Shown: Wolf Creek Country Ledge Stone

DRESSED FIELDSTONE

The rugged look of Dressed Fieldstone stone cladding complements any natural environment. Its rich texture and range of colour enhance a multitude of architectural designs.

Shown: Aspen Dressed Fieldstone

PRO-FIT™ ALPINE LEDGESTONE

Pro-Fit™ Alpine Ledge Stone stone cladding provides a rustic outdoor look that's easy to install. This precise, rugged ledge stone texture provides colour and shadow creation for a variety of design opportunities.

Shown: Black Mountain Pro-Fit™ Alpine Ledge Stone

SOUTHERN LEDGESTONE

Southern Ledge Stone stone cladding offers a rugged and informal appeal with its rough texture and deliberate irregularity. Tight-fitted or mortared, Southern Ledge Stone can be used to achieve a number of unique looks.

Shown: Aspen Southern Ledge Stone

PRO-FIT™ LEDGESTONE

Pro-Fit™ Ledge Stone stone cladding is a practical way to achieve a custom look. Small-scale, low-relief stone claddings are meticulously bundled together to form modular components of equal heights. The component pieces feature a patented interlocking mortar groove for a secure adhesion without grouted joints.

Shown: Shale Pro-Fit™ Ledge Stone

COBBLEFIELD™

The distinctive look of Cobblefield™ stone cladding is at home in residential or commercial settings.

Shown: Texas Cream Cobblefield

CORAL STONE

The delicate fossil patterns and unique surface characteristics of Coral Stone cladding complement contemporary architecture and design beautifully. It can be installed as a random ashlar or in a repeating pattern.

Shown: Fossil Reef Coral Stone

Many other products and colours are available. To request a copy of the Cultured Stone brochure or a copy of the Technical Information Guide for installation guidelines, please call 13 15 79 or download one at pghbricks.com.au

50 year limited warranty. Please refer to the full warranty available at the time of supply.

BRICK TIPS & FACTS

Natural Variation

PGH™ bricks are made from natural clays, fired at extreme temperatures creating products of enduring colour and character. The natural variation in both clay and firing process means textures, composition, size and colour including the appearance of flashing, will vary from batch to batch. Often the the character created by this variability is the very reason bricks are desirable.

Blending and Cleaning

BLENDING

It is essential that all bricks be carefully blended from at least three or four different packs/pallets at the time of laying to provide a consistent colour and texture. Your bricklayer is responsible for ensuring an even colour distribution.

BRICK CLEANING

Brick cleaning is a specialist trade and should only be undertaken by an accredited brick cleaner. The chemicals and high water pressures used can easily damage the product, if not done correctly. Different brick textures and colours often have different cleaning considerations. Dry brushing the bricks periodically to remove residual mortar is an effective way to reduce the amount of effort required to clean bricks. Bricks should be cleaned within 2 to 14 days of laying.

BRICK CLEANING GUIDES ARE AVAILABLE:

pghbricks.com.au
thinkbrick.com.au

Alternatively, please contact PGH™ on 13 15 79 or Think Brick Technical Hotline on 1300 667 617.

Brick Durability

SALT ATTACK RESISTANCE

Bricks are commonly classified into two categories for Salt Attack Resistance:

1. **Exposure Grade (EXP)** – the product is suitable for a severe marine or saline environment. Exposure Grade bricks are less susceptible to salt attack. A severe marine environment is defined as: up to 1km from a surf coast or up to 100m from a non-surf coast.
2. **General Purpose (GP)** – the product is suitable for general environmental conditions. These bricks should not be directly exposed to saline environments. For more information visit www.thinkbrick.com.au

SOLAR ABSORPTANCE RATING (BASIX RATING)

When designing energy efficient buildings, the architects and consulting engineers need to be able to calculate the heat loss or gain of materials used to construct the buildings. This is why building materials are categorised into 3 categories: **Light (L)**, **Medium (M)** and **Dark (D)**. **Light** coloured being a low solar absorptance and **Dark** coloured being a higher solar absorptance.

Disclaimer: Clay bricks are made from naturally occurring minerals. Variations in colour, texture, and size are natural characteristics of clay products and production variations can occur from batch to batch. Colours shown are indicative only and should not be used for final selection. Products ordered should be chosen from actual samples current at the time of order and are subject to availability. Whilst every effort is made to provide samples, brochures and displays consistent with products delivered to site, they should be viewed as a guide only. Customers should ensure that all delivered products are acceptable, and any concerns about products are notified to PGH Bricks™ and Pavers prior to laying. PGH™ bricks (excluding our Glazed collection; Vibrant, Academy, Urban and Seascape) consist of one stretcher face and one header fit for purpose. All warranty claims against product must be made prior to the product being laid. Efflorescence may sometimes appear on bricks. It's a white, salty powder usually from salts in cement and mortar. Fortunately, the powder is completely harmless and will usually weather away with time. You can brush it off, although it may return if the salt source is still active. **WARNING:** Bricks contain crystalline silica. Cutting or grinding these products creates dust, which may be hazardous and should not be inhaled. Please ensure that when cutting or grinding, an approved mask (respirator) is worn.

Cultured Stone Disclaimer: Shade variations can occur from batch to batch. Colours shown are indicative only and should not be used for final selection. © Copyright Boral Masonry Limited – all rights reserved 2016. Warranty: The brick colours shown in this brochure are an indication only and may be different from the actual product. It is a good idea to confirm the availability and view the latest batch colours at one of our Selection Centres before making your decision, and always check the delivered packs as soon as possible. All warranty claims must be made prior to the product being laid. **Transport & Delivery:** To ensure the safe and timely arrival of your bricks, there are a number of considerations that must be made. Bricks may have been transported several times prior to them arriving on site. During this handling, chipping may occur. This will not affect the performance of the brick. If there is an issue, please contact PGH Bricks & Pavers™ to organise a site meeting prior to laying. For specific details, please contact our Customer Service Centre on 13 15 79. **Terms of Sale:** PGH Bricks & Pavers™ is unable to accept liability for costs incurred as a result of failure or delay in delivery of the product. For a complete copy of our Terms of Sale, please contact a PGH™ Selection Centre for terms and conditions.

PGH™ SELECTION CENTRES

Selecting PGH™ bricks has never been easier. At our large network of Selection Centres we offer many services such as colour scheming, product selection and technical advice. Make an appointment today.

 PGH™ BRICKS SCHOFIELDS SELECTION CENTRE
75 Townson Road, Schofields NSW 2762
02 9852 6807

 PGH™ BRICKS FORSTER SELECTION CENTRE
68 Kularoo Drive, Forster, NSW 2428
02 6555 5908

 PGH™ BRICKS FYSHWICK SELECTION CENTRE
26 Lithgow Street, Fyshwick ACT 2609
02 6202 2400

 PGH™ BRICKS LISAROW SELECTION CENTRE
910-912 Pacific Highway, Lisarow NSW 2250
02 4328 0900
