What is the InBrick™ system?

An unlimited design palette with the construction benefits of precast concrete.

InBrick from PGH Bricks & Pavers is an innovative inlay brick system that embeds genuine clay brick tiles into precast concrete panels, bringing the look, feel and durable aesthetic of brick to the inherent construction benefits of precast concrete.

This convenient solution is considerably faster than traditional brickwork due to its offsite prefabrication, allowing for faster construction times onsite, saving you valuable time, money and manpower. Depending on your project, InBrick can be used for both structural and non-structural purposes, with its design flexibility giving you the ability to create truly original buildings.

VersaLiner®

Key benefits

The product for faster and smoother project completion.

- Greater design flexibility with a range of colours, sizes and textures
- Achieves an authentic brick look and feel
- Accommodates arches, headers, soffits and multiple coursing patterns
- Ideal for a variety of project applications - precast, tilt-up or cast in place
- Ideal solution for projects with challenges on site
- Patented single liner technology for higher production efficiencies
- No additional labour or post-installation surface treatment required

Discover the InBrick™ Core Range

Offering the ultimate in design flexibility

There is no limit when it comes to the styles you can create with InBrick. Available in an extensive and truly beautiful range of colours, textures and sizes, architects and designers now have a highly considered palette to play with when producing stunning brickwork. And because InBrick is real brick and the colour is 'fired in', you'll always have rich, consistent and durable colour to withstand the test of time.

Bringing lasting beauty to an effective construction solution.

InBrick is an inlay brick system that embeds genuine clay brick tiles into precast concrete panels. These precast panels can be for structural or non-structural purposes, depending on the building type

PGH thin brick facings are placed into VersaLiner® single use liner in the desired configuration, a process which is quick and forms perfect courses of brick.

After reinforcing is placed, concrete is poured over the configuration and finished in the normal manner.

When the InBrick panel is erected, the VersaLiner® is stripped from the face and the panels are cleaned. The end result is an InBrick concrete precast panel with an InBrick cast façade.

InBrick panels are delivered on-site, ready for installation. They can be used in a variety of project applications: pre-cast, tilt-up or cast in place.

[Click here](#) today how InBrick could elevate the process and end result of your next commercial project.
